

What is the 'Energised' element

It's Important, that you do not confuse EPRP with ordinary PRP. This process is a completely unique and exclusive procedure that is unavailable elsewhere. Ordinary PRP you can now get almost anywhere, but this is very different because the structure of the platelets are energy healed uniquely to suit each persons body individually. This can actually be seen happening in a microscope.

University, In 1994 Carol Everett was tested at the Tokyo Denki University on her energy transfer abilities. The same department also tested Uri Geller. Since 2002 Carol Everett has been 'programming' live samples of blood platelets by means of energy transfer for treatments. This has been used to assist and heal with cell regeneration, inflammation, tendon repair, collagen regrowth & stimulation and other illnesses.

Pioneers, including a few doctors and Harley Street specialists, who after seeing early beneficial changes circa 2002, were interested in trials with Carols platelet methods. This many years before its current popularity. It was done quietly, but then as now achieving the desired results.

Doctors & Scientists in London, S.Africa, America, Monaco and many other parts of the world have also studied the beneficial changes made, when viewed under the microscope when Carol energises platelets. White cell activity increases and the immune system goes into overdrive. Clear changes in behaviour of the platelets and leucocytes etc are observed re immune response. This is the part you can 'see', but there is more. During the therapy itself the same 'messages' are sent everywhere needed. That's where your inner glow starts. Doctors and scientists can't yet explain what is happening. It's considered 'impossible' by current teachings to affect the behaviour of blood platelets by energy or healing, even when seen.

Scientific experts and professors explaining the process have stated that it is possibly a form of quantum physics or string theory mechanics in action. This accounts partly for the energy transfer process. New Monaco trials and research regularly improve knowledge. - *Kano Baker*

Carol Everett

Energy Healed Platelet Rich Plasma Therapy (EPRP)

Cutting edge (EPRP) therapy is anti-ageing & rejuvenation. Using platelet energy healing & platelet 'reprogramming'. Exclusively available in Europe in association ONLY by Carol Everett with Dr Enrique Garcia in Murcia and Dr Cristian Deperdue in Monaco.

Compared to ordinary PRP results are extensive. The procedure is relatively new to aesthetics, but PRP has been recognized as an effective treatment in sports injury, diabetic ulcer treatment, and orthopaedics to name a few. Carol Everett has pioneered this specific treatment since 2002

Patients can now use their own body's regenerative power, to help in both illness or degenerative problems. OR use it cosmetically, with energy healing enhancement. Without concern for infection, foreign material, or surgical intervention.

Studies show great promise for those looking for the younger renewed look. It's also beneficial for those wishing to have fuller facial features but without the use of commercial fillers or nerve freezing agents. This addition to cosmetic and immune enhancement has many possibilities such as physiological repairs, eliminating skin wrinkles, rejuvenating the skin, improving the appearance in those with acne scarring, even hastening the healing process after a facial peel.

Results are normally seen within 4 weeks. Depending on age & health 2 or more sessions may be needed. But it is a 100% natural process, using extracts of your own blood.

Healing-Energised Platelet Rich Plasma Therapy

*Here's the more technical section.
Read later, unless curious.*

EPRP. Is a unique treatment designed to increase immune response, collagen production and reduce wrinkles. Platelets are the body's natural resource for tissue healing, decreasing inflammation and pain, increasing connective tissue and bone density. Stimulating production of new blood cells and collagen. EPRP offers immune building, wrinkle reduction, selected anti-aging procedures and other cosmetic enhancements. Many patients with crow's feet, smiles lines, or forehead wrinkles find their skin becomes significantly smoother with Energised Platelet Rich Plasma Injections.

The mechanism behind Energised Platelet Rich Plasma Therapy is the therapeutic value of platelets within the body. Platelets are found in blood plasma and are the cells responsible for helping to improve blood flow and immune response in an injured area while increasing collagen production. As skin ages, natural collagen production decreases and skin loses its elasticity. This results in unsightly wrinkles and lines. By increasing the number of platelets available, the body has more cells to help generate collagen. This technology is similar to using your own stem cells to regenerate collagen but additionally they are energy enhanced and reprogrammed to stimulate tissue.

The procedure for Platelet Rich Plasma Injections involves taking a small sample of the patient's blood and spinning it in a centrifuge machine. This separates red blood, plasma and platelets by centrifugal action. Carol heals and reprogrammes the blood at this time using energy transfer techniques proven in university tests. (see scientific testing online) Optionally you can now see these very changes in your own living blood on screen. The plasma and platelets are then injected with micro needles into specific areas of the face where wrinkle reduction is needed or areas where skin tightening is desired.

In the Treatment phase platelets are injected into the deep dermis or fat layer of the skin. Platelets gradually increase collagen which can increase skin thickness reduce wrinkles and provide overall health benefits of the skin and tissue. Joints, tendons or other health issues require different procedures initiated by the doctor and Carol to provide the best treatment possible.

EPRP Injections are typically re-done at six weeks and then 2-3 times a year to maintain sufficient collagen production once the desired result is achieved. This process also sends signals to the whole body to rejuvenate, lifting mind body and soul. Because the patient's own plasma is used, there are no preservatives and absolutely no chance of rejection!

Risk. The only significant risk of this type of treatment is mild to moderate short term bruising at the injection site[s]. This side effect is very temporary and highly dependent on whether or not the patient is already prone to bruising and does not occur in every individual. The patient's own pure growth factor is used in this remarkably economical and relatively pain free procedure that naturally repairs damage and also eliminates wrinkles without downtime or surgery.

Any Age. At 64 years old in 2014 and after deciding to try her own treatment a couple of years ago Carol is her own walking advertisement as to the effect of her EPRP therapy. Each person is completely individually analysed by Carol personally and the best course of action for you is suggested. If you want to look five, ten, maybe possibly twenty years younger this is your first place to call.

2 years ago

Present day

Carol says, 'Just over two years ago, after spending years giving to everyone else I was overweight drained and certainly looking my age. I began at that stage to start energised plasma therapy, also having it put back into my upper buttock cheek. After a few sessions I started to get more like my own self, in mind body and soul. My enthusiasm came back, energy levels returned. A year ago I started on my own face. At sixty two years of never exercising I got a personal trainer to help me. I am now wearing clothes I wore ten years ago and my body is matching my new face. I would never have the energy before to even begin. My whole mind body and soul has come up every time I have my own platelets energised, my inspiration and creativity gets energised and I am thinking of doing things someone twenty years younger would do. My friends are providing the compliments and I feel good and much more confident in myself. Its not about vanity, its more about putting a value on yourself and building self respect'. Carol
